

GE APPLIANCES
a Haier company

March 17, 2020

At GE Appliances, we are committed to the well-being of our employees and the communities where they live and work. Following global health guidance from the CDC and WHO, it is our goal to alleviate anticipated stress on the healthcare system and to flatten the curve of the virus. During this uncertain time of global pandemic, GE Appliances has made the decision to voluntarily reduce manufacturing operations.

We are reducing production at many of our facilities and will focus on critical products our country needs. We provide important products and services to people across this country while Americans are spending more time at home. Americans rely on our products to keep their food and medicine safe, homes clean and to cook meals for their families.

The last normal operations for the following locations will be after second shift on Thursday, March 19. Starting with first shift Friday, March 20 through Friday, April 3, we will reduce shifts or temporarily suspend operations at these locations:

Louisville, KY

- AP1 – operating 1 washer line and 1 dryer line on day shift
- AP3 – operating 1 line on day shift
- AP4 – reduced operations to support ongoing manufacturing
- AP5 – halting production

Lafayette, GA

- Roper Corporation – 1 line per shift

Decatur, AL

- Decatur Plant Operations – 1 line per shift

Selmer, TN

- Monogram LLC – halting production

Our distribution centers remain operational to provide parts and inventory to our customers. We will continue delivery and service of appliances while taking precautionary measures to protect our employees and consumers while providing these critical services.
