

GE Profile™ UltraFast Combo with Ventless Heat Technology

GE Profile™ is once again leading the charge in laundry innovation with its UltraFast Combo with Ventless Heat Pump Technology. Combining the power of clean and dry for an ultimate one-and-done addition to the brand's laundry lineup, the new product eliminates the 130* extra minutes consumers waste on average by leaving clothes in the washing machine at the end of a wash cycle.

Named a 2024 CES® Innovation Awards Honoree, the UltraFast Combo combines two jobs into one, eliminating the need for a load transfer allowing owners to do their laundry from start to finish when they are away from home or enjoying other activities. Instead of letting laundry linger between cycles, the washer automatically cycles to dry, taking the load off the owner. It also saves time with its ability to wash and dry a large load in about 2 hours.**

Ventless technology lets you do laundry from anywhere with a water hookup without a need for exterior venting, disrupting traditional design limitations and making the UltraFast Combo the perfect solution for small spaces or larger homes with bigger laundry needs.

Loaded with Premium, Disruptive Features:

- **Greater Energy Savings** with ventless heat pump technology and a **High-Airflow Ventless Drying System** that combine to exceed Energy Star requirements for frontload washers and dryers and delivers **50% more energy efficient drying**.*** With the drying system, you can gently dry delicates, activewear and denim with the recirculated high-speed filtered airflow so you don't have to hang dry.
- **Class-leading Capacity & Design** allows you to clean a king-size comforter and a full set of bedding in a single load with its **4.8 cu. ft capacity** so you can clean more with every wash. Best of all, the machine's **space-saving design and 120v plug** gives you installation flexibility. Plus, the UltraFast Combo is designed at an **ergonomically desirable height** for retrieving and folding clothes on top.
- ***NEW* Pet Hair Remover** delivers a better clean by removing pet hair from fabrics before the wash in an over-the-air update. The high speed of the air flow system and tumble of the UltraFast Combo is uniquely designed to separate the hair from the clothes while the closed loop system allows air to collect the hair before pushing it into the lint filter for easy collection.
- **Wi-Fi Connected with SmartHQ™** gives the power to select detergents, download specialty cycles and initiate updates automatically through the SmartHQ app. Plus, control and monitor laundry from anywhere, engage easy-to-use, customizable settings, receive remote status notifications and more.
- **Adaptive SmartDispense™ Technology** saves time and effort with an intelligent dispenser that holds up to 32 loads of detergent and softener and automatically dispenses the right amount based on load size and detergent type.
- **UltraFresh System with Microban® Antimicrobial Technology** provides antimicrobial protection on the gasket, dispenser, and draining system, to help prevent odors and ensure your Combo stays fresh and clean load after load.
- **Easy-to-Reach Lint Filter System** allows for easily removal of lint and micro particles, ensuring your laundry machine operates at the highest levels of efficiency.

Where to Buy:

Available in Carbon Graphite, the UltraFast Combo with Ventless Heat Pump Technology is available nationwide for a suggested retail price of \$2,899.

* GE Appliances SmartHQ connected data from opt-in consumers' GE UltraFresh Front Load Washers and Dryers in over 90,000 homes from January 2020 - October 2022

** Tested using a 10lb DOE (Department of Energy) or typical mixed load on the Normal Wash + Dry Cycle Eco Dry setting.

*** Efficiency rating as compared to the requirements for ENERGY STAR qualification for standard electric dryers.
